### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Matthew Mulkeen on February 22, 2006.

Claim 1: An analytical device for performing an immunoassay for the detection of a target analyte in a liquid sample comprising:

- (a) a liquid-permeable porous reaction membrane having an upper and a lower surface, an exposed area of the upper surface having immobilized thereupon an antibody or antigen capable of binding to the target analyte, wherein said immobilized antibody or antigen being concentrated in multiple spotted regions of the said upper surface, and a portion of the lower surface of the reaction membrane in ~~[the]~~ breadth corner has no immobilized antigen or antibody,
- (b) a semi-rigid liquid impervious bottom support layer ~~[being]~~ attached to the lower surface of the reaction membrane at ~~[one end along]~~ the breadth corner ~~[side through lower surface]~~ by water insoluble adhesive or tape having glue on both sides,
- (c) a body of absorbent material having an upper surface and a lower surface, capable of absorbing liquid, wherein the body of absorbent material is provided separately from the analytical device and ~~[wherein]~~ in use, the absorbent material is pre-wetted with a liquid and is placed between and in contact with the reaction membrane, which is above the body of the absorbent material, and

the bottom support layer, which is below the body of the absorbent material, and  
[wherein the body of absorbent material is capable of absorbing liquid and,]

(d) [wherein] the [absorbent] body of absorbent material is capable of  
absorbing liquid and is larger in size than the reaction membrane.

3. The following is an examiner's statement of reasons for allowance: the claims define over the prior art of record because the prior art of record fails to teach an analytical device comprising a liquid permeable membrane adhered to a liquid-impervious bottom support layer at the breadth corner and an absorbent member that is larger than the reaction membrane and is provided separately. In use, the absorbent member is pre-wetted with a liquid and placed in between the liquid permeable membrane and the bottom support layer. The prior art of record, US 4,818,677, teaches a device where membrane and the absorbent are sandwiched between two panels that have been attached on the breadth sides. However, this reference fails make obvious a device where the absorbent member is provided separately and assembled together when used.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
